

Synergistic Software, Inc. Rapid Citation with License Scanning

We are proud to announce that **InterOp Mobile 3.0** now supports wireless Drivers License scanning through integration with the **DataFetch Scan & See** wireless barcode scanner, increasing officer independence, response time, and safety.

Robust Automated Searching

Scan a driver's license from almost any State (including Georgia's new license format), initiating an automated GCIC/NCIC query of the driver, as well as a local InterOp RMS involvement/alert search.

Real-time Alert Notification

The InterOp Mobile will return alert notifications from car side queries directly to the display of the Scan & See device. However, alerts are not limited to Wants/Warnings from the GCIC system, they will include system alerts from your agency's InterOp RMS/JMS such as non-submitted Warrants, local BOLO's, sex offender status, investigative alerts, prior involvements, etc.

The screenshot displays the 'Traffic Citation' software interface. It features a top menu bar with options like 'New', 'Find', 'Status', 'Print/Submit', 'Import NCIC', and 'Import NCIC Response'. Below this is a 'Front Page | Narrative' section with various input fields for citation details such as 'Court Case Number', 'NCIC Number', 'Ticket Type', 'Agency', and 'Citation Number'. A 'VEHICLE' section includes fields for 'OLN', 'License Class', 'State', 'Endorsements', 'Expires', 'City', 'State', 'Zip Code', and 'Telephone'. A 'DRIVER' section contains fields for 'DOB', 'Hair', 'Hgt', 'Wgt', 'Sex', 'Eyes', 'Race', and 'Veh Yr.'. There are also checkboxes for 'COMMERCIAL DRIVER LICENSE', '2-LANE ROAD', 'DRIVER REQUESTED ACCURATE', 'DUI (Test Administered)', 'BLOOD', 'BREATH', and 'TEST ADMINISTERED BY'. A 'REMARKS' section is present with a 'Veh' dropdown. A 'VEHICLE' section includes 'Weather' and 'TTL' checkboxes. At the bottom, there are 'OFFICER' and 'SUPERVISOR' fields, a 'Count Date' dropdown, and a 'Count' field. A 'LICENSE DISPLAYED IN LIEU OF BAIL' checkbox is also visible. A 'DataFetch Scan & See' overlay is shown in the foreground, displaying a license scan and a 'Scan' button.

Data Import

All pertinent information scanned from the license can be imported to your Citation, along with any information received from the associated State query return. Imported information can be accessed for all field reporting modules, including Incident, Accident, Field Interview, Criminal Tresspass, Juv. Comp., Vehicle Impound, and more.

Key Features:

- **ENHANCE OFFICER SAFETY!** - eliminate the vulnerability of officers returning to their car with their backs turned before adequate knowledge of the who they are dealing with.
- **INCREASE OFFICER INDEPENDENCE** - by design, officer request of driver queries are not dispatcher priorities. Traditional mobile functionality requires the officer to return to the patrol car to self initiate queries, but no longer. Allow officer to further reduce dispatcher dependence by incorporating the car-side driver queries through the wireless Scan & See scanning device.
- **INCREASE RESPONSE TIME!** - Car-side queries and returns can be completed in as little as 5-10 seconds (depending on connectivity speed), exceeding the time it takes most dispatchers to even receive the initial query from the officer.
